## Understanding SAD (Seasonal Affective Disorder)

As we move into the fall season and daylight hours begin to dwindle, many of us may notice a shift in our mood and energy levels. This change can be more than just a seasonal adjustment; for some, it may be a sign of Seasonal Affective Disorder (SAD).

### What is SAD?

SAD is a type of depression that typically occurs during the fall and winter months when daylight is limited. It's thought to be related to changes in light exposure and can affect your overall well-being.

### Common Symptoms of SAD:

- Persistent Sadness: Feeling down most of the day, nearly every day.
- Fatigue: Experiencing low energy and a lack of motivation.
- Changes in Sleep Patterns: Oversleeping or difficulty staying awake during the day. [Click here](#) to read more.

# IMMUNITY

Like diseases, there are different types of immunity. Existing types of immunity include active and passive immunity. Your immune system defends your body against infections and illnesses by making proteins called antibodies that kill viruses and bacteria.

Active immunity occurs when exposure to a disease triggers the immune system causing the body to produce antibodies to protect the body from the disease triggered.

Passive immunity is provided when a person is given antibodies to fight off diseases rather than producing them through their own immune system.

**Active Immunity:** Active immunity can be acquired through natural immunity or vaccine-induced immunity

**Natural Immunity:** Natural immunity can weaken over time, how quickly or slowly this happens depends on the disease itself. Natural immunity is acquired from exposure to the disease organism through infection.

## The Power of Plant-Based Proteins!

Plant-based proteins are gaining attention for their health benefits. Sources like lentils, chickpeas, quinoa, and edamame are not only rich in protein but also provide essential fiber, vitamins, and minerals. Studies suggest that plant-based diets can help reduce the risk of chronic diseases like heart disease, diabetes, and even certain cancers.

**Quick Tip:** Try swapping animal-based proteins for plant-based ones a few times a week to boost your health and reduce your environmental footprint.

Plant proteins are not just a trend –they're a nutritional powerhouse!

## November Pharmacy Prescription Formularies

Download the latest formularies below. They are updated monthly. The coverage associated with each drug is noted on the formulary. Also included is information regarding which drug products are subject to prior authorization and quantity limits. The formulary documents do not list every covered medication.

## INGREDIENTS

- 1 kilo ground turkey
- 2 eggs lightly beaten
- Half an onion, minced
- ¼ cup almond flour
- 4 garlic cloves, minced
- 1 ½ tablespoon rosemary, minced
- 1 ½ tablespoon chopped thyme
- 1 tablespoon salt
- ½ tablespoon of black pepper
- 3 tablespoons of olive oil
- 1 cup chicken broth
- ¼ cup Dijon mustard
- ¼ cup unsweetened maple syrup
- 2 tablespoons mayonnaise
- Rosemary
- Thyme

## TURKEY MEATBALLS RECIPE

## PREPARATION

In a large bowl, add the ground beef, minced onion, eggs, garlic, almond flour, thyme, rosemary, salt, and pepper. Using our hands, we mix everything.

With a medium size scoop, or with our hands, we mold the meat into meatballs until there is no mixture left. Then, put the meatballs on a plate.

In a large pan over medium heat, add 2 tablespoons of olive oil. Add half of the meatballs in the pan and fry until cooked well. Remove and brown the remaining meatballs by adding another tablespoon of oil to the pan. Remove the remaining meatballs once they're browned as well. Add the chicken broth to the frying pan and scrape the browning from the bottom with a spatula. Then, add the Dijon mustard, mayonnaise and maple syrup. We mix everything and let it boil over low heat until the consistency turns creamier. Add the meatballs to the pan and let it heat. To serve, we garnish our dish with a little rosemary and thyme. And voila, we have our turkey meatballs!

# NOVEMBER NATIONAL DIABETES MONTH

Diabetes is a chronic condition where the body cannot properly use or store glucose due to insufficient or ineffective insulin. This leads to high blood sugar levels. It's a growing epidemic in the U.S., with one in nine adults affected. If current trends continue, one in three Americans may develop diabetes in their lifetime. Diabetes increases the risk of serious health issues, including heart disease, stroke, kidney problems, nerve damage, and vision loss. Factors like age, weight, family history, and lifestyle can increase your risk. Awareness and prevention are crucial to managing this widespread health challenge.

### Steps to Take:

**Get an A1C Screening:** Check your blood sugar levels to assess your risk. Visit [ua.clinic](http://ua.clinic) to schedule your appointment now.

**Choose Alternatives to Sugar:** Opt for healthier sweeteners and reduce sugar intake.

**Manage Sugar Cravings:** Find healthier ways to satisfy cravings.

**Lose Extra Weight:** Even a small weight loss can significantly lower diabetes risk.

**Be More Active:** Regular physical activity helps regulate blood sugar levels.

**Eat Healthy Plant Foods:** Include more vegetables, fruits, and whole grains for essential nutrients.

**Choose Healthy Fats:** Incorporate sources like nuts, seeds, and avocados.

**Avoid Fad Diets:** Focus on sustainable, balanced eating habits
